

Handbook for the geometrical specification of products The ISO-GPS standards

Frédéric Charpentier

Geometrical product specification, which has gone through a complete overhaul to fit a new standardization landscape, represents a strategic component of any industry.

Some of the latest updates to ISO-GPS standards have entailed a number of major fixes. The normative revision process has picked up pace, and industrial design needs that had so far escaped coverage have finally now been standardized. Today's standards are a whole different species to yesterday's standards.

This handbook recaps seventeen key standards into a succinct six chapters. The most recent of these standards have only just been approved. This handbook is intended as an easy-reference pocket companion, and so features a hands-on index with a clear and readable key system. It also features a glossary giving definitions for a handful of the main key terms.

Four of these chapters get down to the 'nuts and bolts' of the topic:

- specification by dimension,
- the datums,
- specification by zone,
- specification by gauge.

This title is the first in a "special issue" collection published by *Technologie* that prepares and groundworks the ISO-GPS standards revision and development process defined, at the ISO conference held in Paris in February 2012, by the five-year roadmap for international experts.

To order your copy*

Order your copy and pay online at www.sceren.com

Alternatively, fill out the order form below and return it to:

CNDP, VPC Nationale, TSA 10961, 86961 Chasseneuil Cedex, France

Copies are also available:

– At la **Librairie de l'éducation**, 13 rue du Four, 75006 Paris, France - **N°Vert 0 800 008 212** - M° Mabillon

– **At all bookshops** in the **SCÉRÉN** network
